

BRYAN ANDERTON

Technical Documentation Writer

Annandale, VA | 240-432-3634 | banderton81@gmail.com | [LinkedIn Profile](#)

PROFESSIONAL SUMMARY

- Technical documentation writer with significant experience transforming complex technical concepts into clear, user-friendly documentation for developers, system administrators, and non-technical audiences alike, applying strong technical knowledge of software development and programming fundamentals to produce accurate technical documentation.
- Proven expertise in administering docs-as-code pipelines to continuously deliver and improve a large set of user guides, release notes, and other materials from technical specifications and knowledgebase articles
- Strong track record of establishing and ensuring adherence to documentation standards and best practices across product teams in a wide range of organizations, from tech startups to large government agencies.
- Highly collaborative with excellent communication skills and strong attention to detail, able to work cross-functionally with engineering, product, and support teams, consistently meeting deadlines and delivering work that makes a measurable impact.

CORE COMPETENCIES & SKILLS

- **Technical Writing & Documentation:** Technical Writing, User Guides, API Documentation (REST, GraphQL), Technical Specifications, Information Architecture, Docs-as-Code, Single-Sourcing & Content Reuse, Release Notes, Content Review & Editing, Style Guide Development, UI/UX Copywriting
- **AI & Generative AI Tools:** Claude, Copilot, ChatGPT, Gemini, AI-First Workflows, Custom AI Agents
- **Tools & Platforms:** Markdown, Confluence, MadCap Flare, Jira, FrameMaker, Adobe Acrobat, Snagit, Microsoft Office Suite, Google Suite, SharePoint
- **Developer, Cloud & DevOps:** CI/CD Pipelines, Git, GitHub, Version Control Systems, Subversion (SVN), Jenkins, AWS, Command Line, HTML, XML, DITA, CSS, SaaS, Cloud Infrastructure
- **Methodologies & Collaboration:** Agile / Scrum, Cross-Functional Collaboration, Team Leadership & Mentorship, Swarm Methodology, Customer Research, Continuous Improvement

PROFESSIONAL EXPERIENCE

ScienceLogic — Reston, VA (Remote)

Senior Principal Documentation Specialist (April 2021 – Present)

Principal Documentation Specialist (July 2019 – April 2021) | Senior Documentation Specialist (January 2015 – July 2019)

- Serve as lead writer for a remote team spread across the U.S. and Europe, and collaborate closely with Engineering, Product, and Support to gather information and produce accurate, user-centered documentation for enterprise on-premises, cloud-based, and SaaS deployments of the ScienceLogic AI Platform.
- Write and maintain a large public-facing content library of user guides, API documentation, and technical specifications — 200+ user manuals, ~4,000 online help pages, and 100+ release notes in MadCap Flare — covering hybrid cloud monitoring, AIOps, application observability, IT workflow automation, system administration, and developer APIs.

- Review and edit documentation authored by other team writers, ensuring a consistent voice, clear and engaging tone, and adherence to grammar, style, and terminology standards.
- Continuously update and improve documentation as new product features are developed or existing ones are updated, working closely with engineering to track release cycles.
- Spearheaded a team-wide shift to an AI-first development model by engineering custom agents in Claude to generate initial files for new releases, draft initial release notes, perform style guide and copy-editing checks (typos, grammar, punctuation), and execute pre-production tasks like link updates and TOC insertion.
- Overhauled the legacy documentation site by architecting dedicated mini-sites for each product line, substantially streamlining customer navigation and content discoverability.
- Partnered with Support to implement a swarm methodology for customer-reported documentation issues, resolving problems in real time rather than through traditional ticketing, driving a 65% reduction in doc-related Support tickets.
- Collaborated with DevOps to establish an automated, docs-as-code CI/CD pipeline through GitHub for building and publishing documentation sites, drastically simplifying site deployment workflows and time-to-publish.
- Rewrote and restructured the GraphQL API manual, adding advanced concept breakdowns, clear terminology definitions, and working code examples to resolve key customer pain points.
- Managed the content migration from legacy SVN to Git, and subsequently from Bitbucket to GitHub, serving as Git Administrator, training team members, and establishing version control systems and standards.
- Authored the company's first formal Documentation Style Guide, helping establish documentation processes and best practices, and standardizing formatting, tone, and technical terminology across all product lines.
- Implemented single-sourcing strategies that consolidated content from 50+ manuals into a single unified deployment guide, reducing duplication and easing long-term maintenance.
- Mentor and manage summer interns and new hire writers, overseeing daily work assignments, product training, and professional development, helping onboard new team members to documentation standards and tooling.

CACI — *Fairfax, VA (Remote)*

Technical Writer 3 (November 2012 – December 2014)

- Supported technical documentation initiatives for the United States Army and Navy across two distinct defense projects.
- Authored and edited user guides, technical specifications, and training materials using Markdown and FrameMaker, collaborating directly with subject-matter experts to ensure technical accuracy.
- Enforced strict military/governmental editorial standards and compliance across all published deliverables, maintaining consistency in tone and terminology across a large body of work.
- Audited UI text, error messages, graphics, and tooltips to improve clarity, grammar, and overall system usability for end users.

EDUCATION

University of Maryland — College Park, MD

Bachelor of Arts in Journalism
